Fixed Frame Mounting Instructions

Please follow the instructions laid out in this manual to complete the installation of your new Focupix Fixed Frame Projector Screen.

Step 1. When attaching the frame together do not insert screws on the top outermost hole on each side.

Step 2. Attach the smaller bracket with one hole, onto the frame using the silver screws provided.

Step 3. Screw the two larger brackets onto the wall, make sure that they are spread apart so that the smaller bracket on the back of the frame will slide down on the larger bracket on the wall when placing the fixed frame onto the wall. Measuring is extremely important here.

Step 4. Insert Spring hooks into frame.

Step 5. Attach the screen to the hooks.

Step 6. Gently place screen on wall, hooking screen onto wall mounts.
Be careful to avoid damaging wall.
